

MicroMappers Ecuador Simulation

April 2016

Purpose:

QCRI will work with SBTF to Micromap new tweets for the Ecuador emergency. This 1-day challenge will require review of up to 3000 tweets. The tagging exercise would be for April 19th, 2016 and coordinated with the SBTF.

Our existing collection has over 755,000 tweets. The MicroMappers interface will allow people to tag new tweets for April 19, 2016 only.

SBTF is coordinating with other responders to use the data. The partner contacts can download the tweets to analyze. However, MicroMappers could be use for high level data. QCRI would need to decide if we can give insights back to the SBTF to give to their partners.

Simulation Activation - QCRI and SBTF:

QCRI has set up some small data clickers (image, text and geo). The data obtained at this recovery stage of the emergency is small. We think this is a good opportunity to review and test our processes and try to obtain some insights.

Per and I agreed that we would not do a wide roll out due to the emergency stage (post-48 hours) and the type of small social data. Per will set up a slack channel for QCRI and a group of participants. Ji will be the point of contact to help click through the data with the developer team to assist.

The Participants : QCRI staff/consultants, SBTF Volunteers including spanish speakers.

Time: up to 24 hours

Mode: A shared slack channel.

Communications needs: We won't do a full launch due to the small size of the data and the timing. (No public blog post or twitter outreach at this time)

Outputs: insights, workflow building to strengthen the team collaboration, a summary blog post after this.

Preparation:

1. Human Tagging tweets (spanish and english)
2. Revise Categories (Heather and Imran)
3. Define outputs - what data outputs will qcri give to Sbt - high level stats?
4. Which Clickers? Will we activate the geoclickers and create a map?

1. Human Tagging Tweets

Task - Heather to coordinate with Luis and Per.

Per will coordinate with Luis and the Ushahidi instance.

2. Revise Categories

Micromappers for Ecuador

- ☐ **Infrastructure Damage** Infrastructure Damage
- ☐ **Other Relevant Information** Other Relevant Information
- ☐ **Urgent Needs** Urgent Needs
- ☐ **Response Efforts** Response Efforts
- ☐ **Not Relevant** Not Relevant
- ☐ **N/A: does not apply, or cannot judge** If these categories do not apply to this message, or you cannot be sure about which is the correct category

MicroMappers: version .5

Injured or dead people Casualties due to the crisis

Caution and advice Warnings issued or lifted, guidance and tips

Displaced and Missing people People who have relocated due to the crisis, even for a short time (includes evacuations)

Shelter and supplies Needs or donations of shelter and/or supplies such as food, water, clothing, medical supplies or blood

Infrastructure and utilities Buildings or roads damaged or operational; utilities/services interrupted or restored

Donation Offers and volunteering Money requested, donated or spent, Services needed or offered by volunteers or professionals

Not related or irrelevant Unrelated to the situation or irrelevant

Cannot judge Not readable or not sure how to classify

Other relevant information Other useful information that helps understand the situation

~~**Sympathy and emotional support** Thoughts and prayers~~

~~**Animal management** Pets and animals, living, missing, displaced, or injured/dead~~

~~**Missing, trapped, or found people** Questions and/or reports about missing or found people~~

~~**Personal updates** Status updates about individuals or loved ones~~

Nepal Earthquake Categories

Ushahidi instance categories for reference.

Todas las categorías

- [Emergencia](#)
- [Reporte Confiable](#)
- [Amenazas](#)
- [Logística](#)
- [Respuesta](#)
- [Novedades de personas](#)

- [Avisos](#)

- [Todos](#)

3. Define outputs

What can QCRI give the SBTF if they ask people to micromap? Could someone give them high level insights by tomorrow afternoon AST?

Text clicker, geoclicker
Images and GDELT?

4. Clickers to activate

Would geoclickers be feasible as well?
GDELT Data

5. Communications

Once all the processes are agreed, then we can do communications with our networks.

Blog summary
<https://micromappers.wordpress.com/2016/05/01/micromappers-for-ecuador/>

Problems: “aggressive words”/profanity filter ?, use boolean with a dictionary “not”, off-topic words - eg. Michael Jordan vs. Jordan.

Options to put into a bucket.

AIDR collection April 18 - 22nd, April 16th was the earthquake
Collected over 1, 663, 000 tweets for research
